Being a successful manager or entrepreneur requires creativity, innovation, and performance. It also requires an understanding of the principles and tools of management. Aimed at the college market, this book is a short, foundational volume on media management. It summarizes the major dimensions of a business school curriculum and applies them to the entire media, media-tech, and digital sectors. Its chapters cover—in a jargonless, non-technical way—the major functions of management. First, creating a media product: the financing of projects and the management of technology, HR, production operations, intellectual assets, and government relations. Second, harvesting the product created: market research, marketing, pricing, and distribution. And third, the control loop: media accounting and strategy planning. In the process, this book becomes an indispensable resource for those aiming for a career in the media and digital field, both in startups and established organizations. This book is designed to help those aiming to join the media and digital sector to become creative managers and managerial creatives. It aims to make them more knowledgeable, less blinded by hype, more effective, and more responsible.

Checks represent a significant volume of payments that need to be processed, cleared, and settled. The Check Clearing for the 21st Century Act (Check 21) facilitated wider use of electronic check processing. It authorized a new legal instrument -- the substitute check -- a paper copy of an image of the front and back of the original check. This report evaluates the implementation and admin. of the act and determines: (1) the gains in economic efficiency from check truncation and evaluates the benefits and costs to the Fed, Reserve System and financial institutions; (2) assesses consumer acceptance of the check truncation process resulting from Check 21; and (3) evaluates the benefits and costs to bank consumers from check truncation. Following the presentation of China's Agenda XXI in 1994, the Fondazione Eni Enrico Mattei began a fruitful collaboration with the SSTC (State Science and Technology Commission) on Natural Resource Accounting of the People's Republic of China. Among other initiatives, the Fondazione organised a seminar held in Beijing in March 1996, entitled "Resources Accounting in China". This volume brings together 11 papers as the result of that seminar. Our main aim was to compare approaches and knowledge of specific issues in this area. As far as the approach is concerned there appear to be some interesting comparisons to be drawn considering the authors' different fields of experience. Seven papers are written by Chinese participants and four by visiting experts from the West. All the Chinese contributions point out the importance of the environment in economic development and a determination to measure the effects as a means to successful management of natural resources. They concentrate on rather specific issues within the constraints of the prevailing economic conditions where identification and pricing of assets tend to be specified by administrative norms. Although the general framework of the Chinese approach tends to be scientific and administrative, all papers contain interesting and useful statistical information. The papers by visiting experts also stress the importance of taking into account environmental aspects in deriving indicators relating to economic development. In contrast to the Chinese contributions, however, they tend to be more abstract and more clearly based on economic theory.

No government can be sustained without the ability to tax its citizens. The question then arises how can a nation do so in a way that's fair and equitable to taxpayers while simultaneously promoting economic growth and providing the state with the funds it needs to adequately address the needs of its citizens? This insightful work, featuring contributions from a stellar array of international tax experts and economists, addresses the crucial, relevant issues which developed countries will confront in the early decades of the 21st century: The pursuit of tax reform. Personal tax base: income or consumption? Tax rate scale: equity and efficiency aspects. Business tax reform: structural and design issues. Interjurisdictional issues. Controlling tax avoidance.

Evaluation for the 21st Century features thoughtfully written introductions to each of the main sections that provide a context and synthesis of the various evaluators' chapters. After reading this groundbreaking book, researchers and
practitioners will be able to recognize these new developments in evaluation as they encounter them, place them in context, and incorporate them into their own evaluation professions and practices. U.S. exports of financial, entertainment, architectural, accounting, computer, and other services have more than doubled in the last seven years. Specifically addressing the needs of service exporters, this book covers issues such as marketing services vs. merchandise, market research, export financing, international payments, breaking trade barriers, and more. Also included is a series of 20 industry-specific articles that give the how-to and where-to for exporting specific services. Today, globalization, advances in technology, greater access to information, and communication via social networks generate an explosion of knowledge and cause the working world to experience rapid change based on knowledge and continuous learning. The challenge for universities is to have a curriculum that prepares students for this digital world, but many characteristics of the school curriculum have been unchanged for decades. Consequently, student experiences can be very different from the experiences required by the labor market. In a learning environment, the desired results will not be achieved if several essential elements are not considered in the instructional teaching process, including learning style, age, and maturity level. Learning Styles and Strategies for Management Students is a critical scholarly resource that provides essential research on the growing recognition of the critical role of education through concepts and principles of styles and strategies of learning. Additionally, it explores key developments in the methodologies, strategies, and learning styles of students, mainly in management studies. Featuring an array of topics such as digital education, sustainability, and management, this book is ideal for academicians, researchers, administrators, curriculum designers, policymakers, practitioners, and students.

This book examines Nile water security through the morphology of the river: it uses the always changing form of the river as a theoretical and empirical device to map and understand how infrastructures and discourses dynamically interact with the Nile. By bringing a history of two centuries of dam development on the Nile in relation with the drainage of a hill slope in Ethiopia on the one hand and irrigation reform in Sudan on the other, the author shows how the scales, units and ‘populations’ figuring in projects to securitize the river emerge through the rearrangement of its water and sediments. The analysis of ‘Making water security’ is more than yet another story of how modern projects of water security have legitimized often violent disposessions of Nile land and water. It shows how no water user is confined by the roles assigned by project engineers and planners. As ongoing modern ‘development’ of the river reduces the prospects for new large diversions of water, the targeted subjects of development and modernization make use of newly opened spaces to carve out their own projects. They creatively mobilize old irrigation and drainage infrastructures in ways that escape the universal logic of water security.

Equity in health care is a basic human right, yet disparities in health and wellness exist across racial lines. Despite the fact that disparities in Indigenous People’s health are particularly dramatic, they are less well understood. This volume focuses on the American Indian, in whom disparities in health are particularly severe. In a disease-specific format, health disparities in the American Indian are identified and discussed, with an emphasis on causes and solutions. Edited by experts in healthcare disparities, one of whom is a member of the Oglala Lakota Tribe, this book focuses attention on the historically overlooked and underappreciated problem of inadequate healthcare for the American Indian and has relevance for Indigenous People’s health around the world. Of interest to all concerned with equity and inclusiveness in healthcare, it will be essential reading for physicians, public health workers, academics, and Indigenous People worldwide.

The Truth can be known with Theanthropic Ethics, which is one of the few scientific ethical categories. Dr. Brian Keen has researched numerous ethical categories, and has found only Theanthropic Ethics understands that there is one
universally applicable Truth. The Truth has practical application in every enterprise, business, or profession. Any business, enterprise, or profession operating in an ethical manner will have the necessary POWER to succeed. Accounting is featured since accountants as professionals must utilize scientific methodologies. Businesses and enterprises require POWER Living People to employ, since ethical employees are an asset in Truth. Many entrepreneurs are POWER Living People. Dr. Keen proves through conclusions from objective data that the Truth has relevance for today. Ethical dilemmas can be resolved through adherence to the Truth. For example, would you allow a cashier to accept two $5 bills for a product costing $45, and give a $10 bill for change? Would adherence to a philosophy that $5 + $5 = $10 be sufficient? Dr. Keen knows the Truth that $5 + $5 = $10 when the same types are added. Living the Truth is ethical when utilizing this scientifically- verifica ble ethical category, which is confirmed in Theanthropic Ethics.

Public and media interest in the climate change issue has increased exponentially in recent years. Climate change, or "global warming," is a complex problem with far-reaching social and economic impacts. Climate Change in the 21st Century brings together all the major aspects of global warming to give a state of the art description of our collective understanding of this phenomenon and what can be done to counteract it on both the local and global scale. Stewart Cohen and Melissa Waddell explain and clarify the different ways of approaching the study of climate change and the fundamental ideas behind them. From a history of climate change research to current attempts to mitigate its impact such as the Kyoto Protocol and carbon trading, they explore key ideas from many fields of study, outlining the environmental and human dimensions of global warming. Climate Change in the 21st Century goes beyond climate modeling to investigate interdisciplinary attempts to measure and forecast the complex impacts of future climate change on communities, how we assess their vulnerability, and how we plan to adapt our society. The book explores the impact of climate change on different ecosystems as well as what the social and economic understanding of this phenomenon can tell us; it also links discussions of climate change with the global discourse of sustainable development. Climate Change in the 21st Century provides a comprehensive, understandable, but academically informed introduction to the world's biggest challenge for both students and concerned citizens.

This book was first published in 2007. Most countries levy taxes on corporations, but the impact - and therefore the wisdom - of such taxes is highly controversial among economists. Does the burden of these taxes fall on wealthy shareowners, or is it passed along to those who work for, or buy the products of, corporations? Can a country with high corporate taxes remain competitive in the global economy? This book features research by leading economists and accountants that sheds light on these and related questions, including how taxes affect corporate dividend policy, stock market value, avoidance, and evasion. The studies promise to inform both future tax policy and regulatory policy, especially in light of the Sarbanes-Oxley Act and other actions by the Securities and Exchange Commission that are having profound effects on the market for tax planning and auditing in the wake of the well-publicized accounting scandals in Enron and WorldCom.

Raymond John Chambers was born just over a century ago on 16 November 1917. It is more than fifty years since his first classic, Accounting, Evaluation and Economic Behavior, was published, more than forty since Securities and Obscurities: Reform of the Law of Company Accounts (republished in 1980 as Accounting in Disarray) and over twenty since the unique An Accounting Thesaurus: Five Hundred Years of Accounting. They are drawn upon extensively in this biography of Chambers’ intellectual contributions, as are other of his published works. Importantly, we also analyze archival correspondence not previously examined. While Chambers provided several bibliographical summaries of his work, without the benefits of reviewing and interspersing the text with correspondence materials from the Chambers Archive this study would lack an appreciation of the impact of his early childhood, and nuances related to his practical (including numerous consultancies) and academic experiences. The ‘semi-biographical narrative’ codifies article and editorial length exercises by the authors drawing on parts of the archive related to theory development, measurement and communication. Other parts are also examined. This allows us to respond to those critics who claim his reforms were naïve. They further reveal a man of theory and practice, whose theoretical ideas were solidly grounded on observations from his myriad interests and experiences. Many of his practical experiences have not been examined previously. This approach and the first book-length biography differentiates this work from earlier analyses of Chambers’ contribution to the accounting literature. We provide evidence to support the continued push for the reforms he proposed to accepted accounting thought and practice to ensure accounting is the serviceable technology so admired by Pacioli, Da Vinci and many other Renaissance pioneers. It will be of interest to researchers, educators, practitioners and regulators alike. U.S. Emergency Management in the 21st Century: From Disaster to Catastrophe explores a critical issue in American public policy: Are the current public sector emergency management systems sufficient to handle future disasters given the environmental and social changes underway? In this timely book, Claire B. Rubin and Susan L. Cutter focus on disaster recovery efforts, community resilience, and public policy issues of related to recent disasters and what they portend for the future. The Truth can be known with Theanthropic Ethics, which is one of the few scientific ethical categories. Dr. Brian Keen has researched numerous ethical categories, and has found only Theanthropic Ethics understands that there is one universally applicable Truth. The Truth has practical application in every enterprise, business, or profession. Any business, enterprise, or profession operating in an ethical manner will have the necessary "POWER" to succeed. Accounting is featured since accountants as professionals must utilize scientific methodologies. Businesses and enterprises require "POWER Living People" to employ, since ethical employees are an asset in Truth. Many entrepreneurs are "POWER Living People." Dr. Keen proves through conclusions from objective data that the Truth has relevance for today. Ethical dilemmas can be resolved through adherence to the Truth. For example, would you allow a cashier to accept two $5 bills for a product costing $45, and give a $10 bill for change? Would adherence to a philosophy that 5 + 5 = 55 be sufficient? Dr. Keen knows the Truth that 5 + 5 = 10 when the same types are added. Living the Truth is ethical when utilizing this scientifically-verifiable ethical category, which is confirmed in Theanthropic Ethics.
